Suricata - Feature #1008
Optionally have http_uri buffer start with uri path for use in proxied environments
10/23/2013 05:25 AM - Will Metcalf

Description
We need a toggle in the libhtp config to have the http_uri buffer point to the beginning of the URI path for proxied environments. We often use pcre with anchors, urilen, depth/offset etc in a uri which breaks when host is contained with-in the URI. http_uri now points to start of path in snort.

See the "touched by a proxy" threads on the following for importance.
