**Description**

When managing a few thousand rules with a mixed drop/reject policy it might be useful for fast.log to show if a packet has been dropped or rejected, at the moment it can only show drop.

for example:

```plaintext
reject http $HOME_NET any -> $EXTERNAL_NET any (msg:"ET POLICY HTTP Request to .su TLD (Soviet Union) Often Malware Related"; flow:established,to_server; content:".su|0d 0a|"; http_header; pcre:"/Host\x3A\[^
\n\]\Esu\x0D\x0A/H"; reference:url, www.abuse.ch/?p=3581; classtype:trojan-activity; sid:2014170; rev:2)
```

Shows this in fast.log

12/21/2016-17:23:33.897239  [Drop]  [**]  [1:2014170:2]  ET POLICY HTTP Request to .su TLD (Soviet Union) Often Malware Related  [**] [Classification: A Network Trojan was detected] [Priority: 1] {TCP} 192.168.2.12:12507 -> 104.25.73.38:80

**History**

Looks like Snort does this as well with possible values being:
- Allow
- CDrop
- WDrop
- Drop
- FDrop

so breaking compatibility with Snort should not be an issue, would just want to verify some Snort output.

Reason: I think fast.log is one of the things we should stick with Snort compatibility if we can, as that is where the format is from and existing tools may be depending on it.

#2 - 01/04/2017 03:04 PM - Andreas Herz

I had a similiar request some time ago, wanted the "WDrop" but after some thinking I would prefer better wording. Maybe as an option to choose between snort compatible and some other?
