rate_filter inconsistency: triggered after "count" detections when by_rule, and after count+1 detections when by_src/by_dst.

Description
When I trying to rate_filter by rule, the filter triggered on "count" detections. When I change rate_filter to by src/dst, program allows one more detection before triggering the filter.
In function ThresholdHandlePacketRule() (used on by_rule), event filtered when current_count >= td->count, but in corresponding code in function ThresholdHandlePacketHost() (used on by src/dst), event triggered when current_count > td->count. This situation leads to inconsistency.
