Suricata - Feature #2661
output the http-body-data to eve.json
11/02/2018 07:07 AM - Hao Han

Status: New
Priority: Normal
Assignee: Community Ticket
Category: 
Target version: TBD
Effort: high
Difficulty: 
Label: 

Description
I have two requirements:
1. We do not need to output all the request or response body. Instead, only those text related body, e.g. html, json, txt, are required.
2. Output those http-body-data as a json field to eve.json or redis. We need to analyze the http headers and http body together.
