**Description**

Microsoft is proposing a DCERPC UID to name mapping. It is used by Zeek to allow mapping of UID to human understandable names (see [https://github.com/bro/bro/blob/master/scripts/base/protocols/dce-rpc/consts.bro](https://github.com/bro/bro/blob/master/scripts/base/protocols/dce-rpc/consts.bro)).

We could integrate that into dcerpc output to get more user friendly events.
