Suricata - Bug #3162

TLS Lua output does not work without TLS log

09/13/2019 09:46 PM - Mats Klepsland

Status: Closed
Priority: Normal
Assignee: Mats Klepsland
Category: 
Target version: 5.0rc1
Affected Versions: 
Effort: 
Difficulty: 
Label: Needs backport

Description
It seems that the TLS Lua output logger is not registered, causing it to not work unless TLS log is enabled. This will probably be fixed by adding AppLayerParserRegisterLogger(...) to the correct place.

This seems to be the case for SSH, as well.
