**Description**

I'm trying to upgrade from Suricata 4.1.3 to 4.1.4. Both are built on the same Linux server. When I run Suricata 4.1.4, it always crashes at exit when NSS_Shutdown() is called. Seems NSS is not initialized successfully for 4.1.4.

Suricata 4.1.3 doesn't have this problem.

**History**

#### #1 - 09/16/2019 02:07 PM - Yujie Zhao

I'm running Suricata 4.1.4, and that's related to the problem.

It seems Suricata 4.1.4 won't initialize NSS in the testing mode, but 4.1.3 will.

#### #2 - 09/16/2019 02:58 PM - Yujie Zhao

Here is the root cause:

In 4.1.3, Suricata exits directly in the test mode:

```c
if (suricata.run_mode == RUNMODE_CONF_TEST) {
    SCLogNotice("Configuration provided was successfully loaded. Exiting.");
    #ifdef HAVE_MAGIC
    MagicDeinit();
    #endif
    exit(EXIT_SUCCESS);
}
```

In 4.1.4, the code is changed to support the engine analysis mode. Suricata doesn't exit directly, and instead it tries to clean up and that calls NSS_Shutdown() and triggers the crash.

```c
if (suricata.run_mode == RUNMODE_ENGINE_ANALYSIS) {
    goto out;
} else if (suricata.run_mode == RUNMODE_CONF_TEST) {
    SCLogNotice("Configuration provided was successfully loaded. Exiting.");
    goto out;
}
```
