I need help installing Suricata because it is presenting these errors

make install-conf
make[1]: Entering directory '/home/ids/suricata/oisf'
install -d "*/usr/local/etc/suricata/"
install -d "*/usr/local/var/log/suricata/files"
install -d "*/usr/local/var/log/suricata/certs"
install -d "*/usr/local/var/run/
install -m 770 -d "/usr/local/var/run/suricata"
make[1]: Leaving directory '/home/ids/suricata/oisf'
make install-rules
make[1]: Entering directory '/home/ids/suricata/oisf'
error: rules not installed as suricata-update not available
Makefile:936: recipe for target 'install-rules' failed
make[1]: *** [install-rules] Error 1
make[1]: Leaving directory '/home/ids/suricata/oisf'
Makefile:916: recipe for target 'install-full' failed
make: *** [install-full] Error 2

History

#1 - 01/24/2020 03:57 PM - Shivani Bhardwaj
  Hi Fernando!
  Could you please tell how did you build Suricata? Preferably with all the commands you used in the process?

#2 - 01/24/2020 04:06 PM - Victor Julien
- Tracker changed from Bug to Support
- Project changed from Suricata-Update to Suricata
- Description updated
- Assignee deleted (Shivani Bhardwaj)
- Priority changed from High to Normal

#3 - 09/05/2020 09:38 PM - Andreas Herz
- Status changed from New to Closed

Hi, we're closing this issue since there have been no further responses. If you think this bug is still relevant, try to test it again with the most recent version of suricata and reopen the issue. If you want to improve the bug report please take a look at
https://redmine.openinfosecfoundation.org/projects/suricata/wiki/Reporting_Bugs
