Suricata - Bug #3450

signature with sticky buffer with subsequent pcre check in a different buffer loads but will never match

01/27/2020 06:44 PM - Jason Taylor

Status: Closed
Priority: Normal
Assignee: Jeff Lucovsky
Category: Target version: 5.0.3
Affected Versions: 5.0.1
Effort: Difficulty: Label:

Description

alert http $HOME_NET any -> $EXTERNAL_NET any (msg:"suri 5 pcre fun"; flow:established.to_server; http.method; content:"POST"; http.uri; content:".php"; http.header; content:"0d 0a\User-Agent0d 0a"; content:"Referer20\"; pcre:"/[A-F0-9]{9}$/P");

This rule loads in suri 5 but does not fire on pcap. It seems that the sticky buffer is set and loads the pcre within the existing sticky buffer even though we specify the buffer for the pcre.

If the pcre is moved to the front of the rule, the rule fires as expected, example:

alert http $HOME_NET any -> $EXTERNAL_NET any (msg:"suri 5 pcre fun"; flow:established.to_server; pcre:"/[A-F0-9]{9}$/P"); http.method; content:"POST"; http.uri; content:".php"; http.header; content:"0d 0a\User-Agent0d 0a"; content:"Referer20\";)

History

What if you reset the sticky buffer before the pcre? By adding a pkt_data; before it.

Resetting with pkt_data prior to the pcre will result in the rule firing as expected. It will also work if we switch it up to use something like "http.request.body; pcre:"/[A-F0-9]{9}$/";"

We should probably reject the rule based on the pcre specifying a buffer while a sticky buffer is already active.
