Description
Current createst script generates only the filter blocks as per eve.json, extend its functionality to add a global minimum required version of Suricata as mentioned on command line.

Expectation
createst.py mytest mypcap --add-min-version 5.0

The final generated test.yaml should have a min suricata version defined globally. e.g. https://github.com/OISF/suricata-verify/blob/master/tests/flowbit-oring/test.yaml

Hi Shivani,
Just a small question regarding the wording of the commandline param. Could I change it to "min-version" so that the it is consistent with the existing params, or should I use "add-min-version" as given in the text?
