Currently we can output "sort" of rule profiling: sorted by ticks, avg ticks, checks, etc. I'd like to support more. The below would output for ticks, avgticks and checks separately.

```
rules:

  # Profiling can be disabled here, but it will still have a
  # performance impact if compiled in.
  enabled: yes

  # Sort options: ticks, avgticks, checks, matches
  sort: ticks, avgticks, checks

  # Limit the number of items printed at exit.
  limit: 25
```

Each output would also print what it's output type is.
