Suricata - Feature #629
Add User-Agent to filestore metadata
11/14/2012 01:20 PM - Ludovico Cavedon

Status: Closed
Priority: Normal
Assignee: Ludovico Cavedon
Category: Target version: 1.4rc1
Effort: Label:

Description
Here is a patch to add the content of the User-Agent header to the filestore metadata:
https://github.com/cavedon/suricata/commit/06a1e9fc9fbdd198558557d851f7390271398e95

It would be great if it could be merged into future versions of suricata.

Can you do a pull request on github for this?
Ideally we'd not loop the headers list for each of those log lines like we do now for LogFilestoreMetaGetHost and LogFilestoreMetaGetReferer.

Done: https://github.com/inliniac/suricata/pull/226
It actually includes also the commit for #628 as the 2 commits were done on the same branch.

Ideally we'd not loop the headers list for each of those log lines like we do now for LogFilestoreMetaGetHost and LogFilestoreMetaGetReferer.

I see, are you saying that we should not loop for each one of them, but loop once and fetch the three of them?

Thanks

Right. Maybe output directly from the loop.

Although really, it would probably be better to not output while holding a flow lock, but that would involve buffering and in general more significant changes.

Merged the PR, thanks. We can do the optimization later. Feel free to take that task :)
