Here is a patch to add the content of the User-Agent header to the filestore metadata: https://github.com/cavedon/suricata/commit/06a1e9fc9fbdd198558557d851f7390271398e95

It would be great if it could be merged into future versions of suricata.
Merged the PR, thanks. We can do the optimization later. Feel free to take that task :)
