We'll have to see if we can make the buildbot website public.

Things to consider:
- auth: no one should be able to modify w/o auth
- private data: private data like test pcaps should remain private

Other things?

#1 - 12/05/2012 02:28 AM - Eric Leblond
- Assignee set to Eric Leblond
- % Done changed from 0 to 80

It is almost done. Anonymous can just look at the interface. Authenticated users can start build.

Thing missing is an URL and an apache redirect to have everything accessible in HTTPS.

#2 - 12/05/2012 07:13 AM - Victor Julien
To what extend is private information protected? Mostly care about pcaps that we can't share publicly. But also private sigs (like from etpro).

#3 - 12/06/2012 07:56 AM - Eric Leblond
I’ve discussed with people on #buildbot IRC channel. Web status do not provide any mean to get files used by buildslave and buildmaster. I've also study the code with the help of a confirmed twisted user and we get to the conclusion that, given the protection method inside twisted, this is the case.

#4 - 12/07/2012 09:18 AM - Victor Julien
- Status changed from New to Closed
- % Done changed from 80 to 100

https://buildbot.suricata-ids.org/

Thanks Eric.
