Support the new GSO-avoidance NFQ feature

Florian Westphal has recently submitted a patchset that allows the kernel not to split big packet received by the network card. This provides a performance boost.

The patchset is available here: [http://www.spinics.net/lists/netfilter-devel/msg26029.html](http://www.spinics.net/lists/netfilter-devel/msg26029.html)

Suricata should support this to increase its performance in IPS mode.
