### The Open Build Service (OBS)

The OBS is a generic system to build and distribute packages from sources in an automatic, consistent and reproducible way. It makes it possible to release software for a wide range of operating systems and hardware architectures. The OBS reference server, which we use to build our distribution, currently has over 35,000 users that are building over 200,000 packages for 22 base distributions on 6 architectures.

This packaging system should be explored, the same way we explore(make use of) the Ubuntu PPA.

### History

**#1 - 09/10/2013 04:32 AM - Victor Julien**
- Description updated

**#2 - 09/10/2013 04:35 AM - Victor Julien**
- Assignee set to Anonymous
- Priority changed from Normal to Low

Would be nice indeed, although it seems Suse is not a common platform in the infosec community. At least, hardly ever hear about someone using it. So think we can leave this to the community.

**#3 - 10/26/2013 10:21 AM - Victor Julien**
- Target version set to TBD

**#4 - 04/24/2015 04:41 AM - Victor Julien**
- Target version changed from TBD to Packaging/PPA
